DESIGNATION: PRODUCT MANAGER I

Role Description:

- Product Managers play a pivotal role in leveraging technology for providing an exceptional customer experience.
- With the analytical and problem-solving mindset, they get deeper into the function/problem space, work with stakeholders and partners to develop a wider perspective, take an outside-in view of the problems and create a vision, strategy and roadmap of how software can solve immediate needs/wants, setting the stage for the right disruptions/innovations of the future.
- Once envisioned, they inspire and align stakeholders - business, operations and finance, and through engineers transform their vision into reality.

Roles & Responsibilities (What you'll do):

- Drive the product charter with the gamut of the business, be the voice of the customer and conduct extensive user studies to understand customer needs and identify current gaps in the system.
- Assist to define a product vision and strategy.
- Narrate the product requirements and bring the projects to successful completion.
- Work with exceptional engineers to build high-quality machine-learnt models to develop a deep understanding of user taste, profile and needs
- Collaborate with partner teams, business teams and other cross-functional stakeholders effectively in driving the projects and be the point of contact on the team

Skills Required (What you'll need):

- Excellent communication, problem-solving, organizational and analytical skills, with the ability to evolve product strategy based on research, data and industry trend
- Strong technical abilities with experience working for engineering teams
- Ability to thrive in a cross-functional and fast-paced environment
- Ready to roll up sleeves to spend time designing UI, analyzing data, setting up quality processes and guardrails, jumping into the business analysis as required
