HiLabs.

PRODUCT MANAGEMENT CASE STUDY

Enhanced Contract Management System

CLEAN DATA. HIDDEN POTENTIAL. UNLOCKED.

Turning dirty data into contract intelligence for faster, safer payer-provider agreements using advanced AI & NLP

4-6 Weeks

Target negotiation cycle time (reduced from 3-6 months)

>95%

Provider data accuracy with MCheck integration

<1%

Contract leakage risk with automated detection

MARKET CONTEXT

The Cost of Fragmentation & "Dirty Data"

HiLabs.

Critical Pain Points

Manual Contracting Overhead

Teams rely on static spreadsheets and fragmented emails. $20-23B annual admin cost with negotiation cycles dragging on for 3-6 months.

The "Dirty Data" Crisis

81% of provider directory data is incorrect. This creates downstream claim errors, audit failures (>95% for MA plans), and provider abrasion.

Information Asymmetry

Providers often have better market data than payers. Contracting managers lack real-time benchmarking visibility during negotiations.

Regulatory Imperatives

Transparency in Coverage (TiC)

Mandates public pricing disclosure, demanding accurate, machine-readable readable data.

No Surprises Act (NSA)

Requires accurate directories and advanced cost estimates to protect members.

User Personas & Workflow Friction

HiLabs.

Key Stakeholders & Pain Points

Network Contract Manager

- Lack of real-time benchmarks vs. providers
- Weeks spent manually gathering data

Provider Relations Rep

- Overwhelmed by volume (email/PDFs)
- High abrasion from directory errors

Legal & Compliance

- Risk of missing deviations in long docs
- Manual audits for TiC/NSA compliance

Financial Analyst

- Static Excel models with stale data
- Cannot simulate 'shadow claims' fast enough enough

The Broken Contracting Lifecycle

Drafting & Proposal → Manual Info → Negotiation (Email/Phone) → Offline Neg. → Impact Modeling → Static Model → Legal Review

Reality: 3-6 month cycle time with multiple "swivel-chair" handoffs between Word, Excel, and Email.

$1,000+	High	6 Mo
Admin Cost Per Contract	Leakage Risk (Stop-Loss)	Avg. Cycle Time

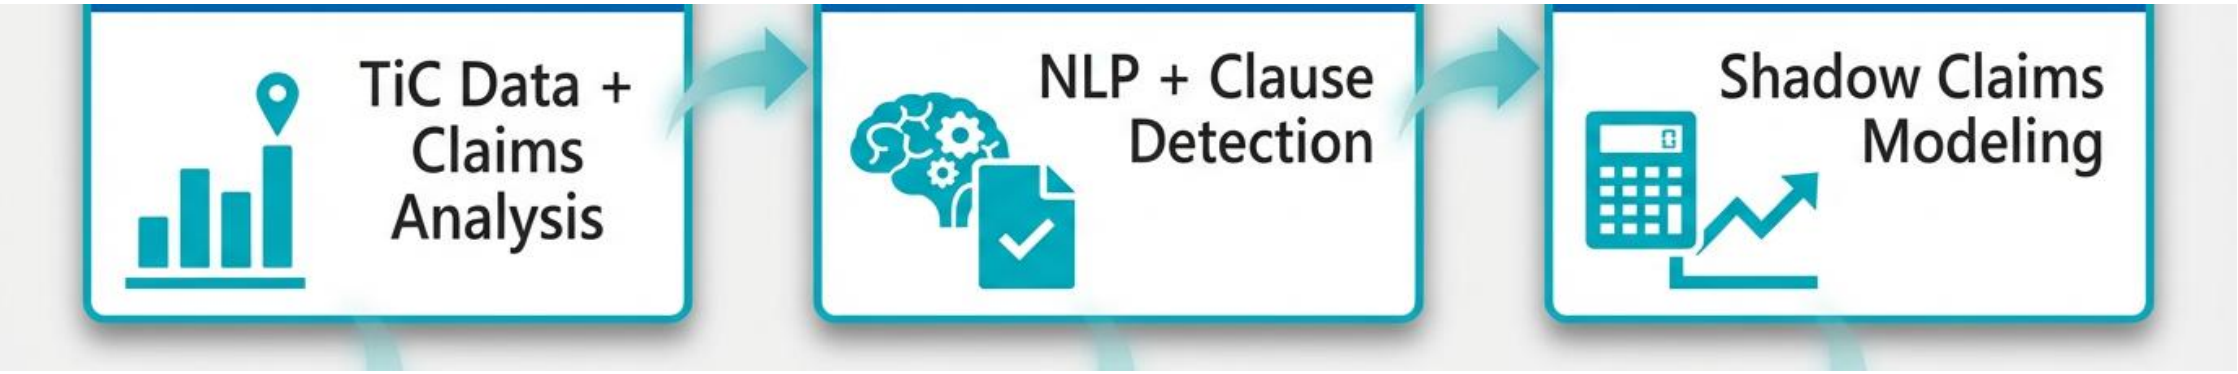
SOLUTION ARCHITECTURE

AI-Native Contract Intelligence Platform

HiLabs.



PLATFORM SERVICES | Centralized Repository | Natural Language Search | Audit Trail & Compliance | MCheck™ Data Integration | Powered by HiLabs AI Core

Rate Benchmarking

Market Intelligence Layer

- TiC Data Ingestion: Process machine-readable files to benchmark vs. market rates.
- R3 Scoring Algorithm: Evaluate benchmarks for reliability, recency, and relevance.
- Geo-Specific Norms: CBSA and Medicare reimbursement comparisons.

Negotiation Assist

Co-Pilot Workflow

- Clause Extraction (NLP): Auto-detect deviations from standard standard playbooks.
- Financial Trap Detector: Flag missing "lesser-of" clauses and clauses and stop-loss risks.
- RAG-Grounded Scripts: Generate negotiation talking points with audit trails.

Contract Simulation

Financial Modeling

- Shadow Claims Pricing: Reprice historical claims with proposed terms.
- Scenario Modeling: Real-time "what-if" analysis for MLR MLR impact.
- Premium Impact: Project cost-per-member-per-month (PMPM) changes.

Modules are designed for seamless integration with existing CLM and Claims Systems (Facets, QNXT)

COMPETITIVE ADVANTAGE

Why HiLabs Wins: Tech Differentiation

HiLabs.

Healthcare-Specific NLP

Trained on millions of provider contracts, manuals, and Medicaid agreements—not generic legal texts.

Semantic Understanding

RAG Architecture

Retrieval-Augmented Generation ensures all AI outputs are grounded in source docs. Zero hallucinations.

Audit-Ready

R3 Scoring Algorithm

Proprietary scoring for benchmarks based on Reliability, Reliability, Recency, and Relevance weights.

Data Quality

MCheck™ Integration

Deep integration with existing provider data foundation ensures accuracy across the lifecycle.

Unified Data

Capability	Generic CLM	HiLabs AI
Clause Extraction Identify legal terms in contracts	✕ Keywords only	✓ Semantic & Contextual
Benchmarking Compare rates vs market	— None / Manual Upload	✓ Real-time TiC Data
Deviation Detection Flag non-standard terms	— Rule-based	✓ AI Playbook Match
Financial Simulation Model impact on MLR	✕ Offline Excel	✓ Integrated Shadow Pricing

The "Defensible" Outcome

Higher precision, faster throughput, and total auditability.

100% TRACEABLE

10x FASTER REVIEW

Differentiation based on proprietary technology stack and deep healthcare domain expertise.

GO-TO-MARKET STRATEGY

Implementation Roadmap & Rollout

HiLabs.

MONTHS 1-3

Data Foundation

- Ingest & digitize historical provider contracts
- Train NLP extractors on client templates
- Stand up MCheck™ API connections

KEY DELIVERABLE

Searchable Repo & Baseline Accuracy

MONTHS 4-6

Pilot "Co-Pilot"

- Deploy workflow to core negotiation team team
- Validate deviation detection accuracy
- Iterative feedback loop for UX refinement

SUCCESS METRIC

>70% User Adoption in Pilot Group

MONTHS 7-12

Financial Integration

- Connect claims warehouse for "shadow pricing" pricing"
- Enable enterprise-wide deployment
- Measure MLR impact & NSA compliance

TARGET OUTCOME

Audit-Ready Compliance & ROI

Target Buyers (ICP)

- VP Network Management
- CDO / CIO
- Head of Payment Integrity
- General Counsel

Phased approach minimizes operational disruption while accelerating time-to-value.

STRATEGIC VISION

Product Roadmap: The Path to Autonomy

HiLabs.

NOW - 6 MONTHS

Foundation & Assist

Fixing the data & enabling users

- Centralized Repository: Digitized contracts with with metadata search.
- Rate Benchmarking V1: TiC data integration for integration for key markets.
- Clause Extraction: Detect non-standard terms terms (payment, term).
- Renewal Alerts: Proactive notifications for for expiring contracts.
- Word Add-In: Read-only contract insights within MS Word.

6 - 12 MONTHS

Simulation & Scale

Deep financial integration

- Simulation Engine: Shadow claims pricing & MLR MLR impact modeling.
- Automated Redlining: AI suggestions for clause remediation.
- Delegated Entity Monitor: Compliance tracking for downstream partners.
- Pricing Export: Push approved rates to adjudication systems.

12 - 24 MONTHS

Agentic AI & VBC

Autonomous contract operations

- Agentic AI: Autonomous negotiation for low-risk standard contracts.
- VBC Modeling: Complex incentive & quality bonus simulations.
- Predictive Win-Rates: AI likelihood scores for proposed terms.
- Bi-Directional Sync: Real-time updates between CLM and Core Admin.

Ready to Transform Contract Management?

Partner with HiLabs to deploy an AI-native, audit-ready intelligence layer.

Launch Pilot Program

Roadmap subject to quarterly review based on customer feedback and market dynamics.
